

# M-G Product Line Features Wide Variety of Feeds

The new M-G feed mill is a high point in the agricultural economy of South Central Texas because it has been dedicated to keeping feed quality high and prices low since its founding by

Marvin Gilbreath in 1939. All M-G Feed is fresh-formulated to order. All orders for M-G Feed are taken by salesmen one day and manufactured the next day in

Weimar and delivered to dealers on the third day to assure absolute freshness, peak palatability and no loss of nutritional strength on delivery. Only the finest quality grain,

protein, minerals, vitamins and medication are used in M-G Feed.

As an added protection for animals, all grain is re-cleaned to remove chaff and any harmful particles, which usually are present in grain when it is first received at the mill.

Magnets are used by M-G to remove any metal which might be in the grain and which can cause "hardware disease" in cattle.

Knowing that it makes sense for feed formulas to vary according to the specific nutritional requirements of different areas, all M-G Feeds are custom mixed to meet South Central Texas, East Texas and Gulf Coast requirements.

No feed ingredients are handled by hand but go straight from the mixer into the sacks.

Grind, texture and color

samples are tested from each batch of mixed feed to guarantee uniformity and proper consistency of food value in each bag.

Many changes have taken place in the M-G Feed Mill operation since the first sack of feed was bagged in 1941.

The new mill now has a capacity of 45 tons of feed per hour and related and specialized products have been developed through the years.

Through research and studies of nutritional needs, M-G constantly is developing new feeds that best are suited for the South Central Texas, East Texas and Gulf Coast areas.

These are in addition to the regular M-G cattle feeds, dairy rations, poultry feeds, hog feeds and horse feeds, deer feeds and all types of grains.
